## EDUCATION

### Harvard University

*S.M. Data Science. GPA 3.8*

**Expected May 2027**

*Cambridge, MA*

**Relevant Coursework:** AI Safety & Alignment, MLOps, Intro to Linear Models, Intro to Data Science.

**Activities:** AI Safety Student Team.

### University of Michigan

**May 2025**

*B.S. Mathematics and Physics, Minor in Computer Science. GPA 3.8*

*Ann Arbor, MI*

**Relevant Coursework:** Machine Learning, Continuous Optimization, Linear Programming, Numerical Linear Algebra, Science of LLMs, Complex Systems Modeling, Computational Physics, Probability Theory.

**Activities:** Physics Department Peer Advisor, Athletics Department Tutor, Wolverine Tutor, Overwatch Team Captain.

### Bronx High School of Science

**June 2021**

*GPA: 4.0*

*New York, NY*

## RESEARCH EXPERIENCE

### Cambridge Boston Alignment Initiative

**Feb. 2026 – Present**

*Research Fellow*

*Remote*

- Selected from ~300 applicants for the CBAI Spring 2026 Research Fellowship to work with Dr. Laura Ruis on understanding scaling trends of **chain-of-thought monitorability** in LLMs.

### Harvard University

**Sep. 2025 – Present**

*Research Assistant*

*Cambridge, MA*

- Developing extensions of **masked diffusion models** utilizing ideas from **recursive reasoning** frameworks.

### University of Michigan Center for Academic Innovation

**Oct. 2023 – Aug. 2025**

*Data Science Fellow*

*Ann Arbor, MI*

- Developed novel two-stage **RAG methodology** addressing semantic gap in retrieval by generating ideal descriptions as intermediate query representations, improving course recommendation relevance over direct embedding similarity.
- Built and deployed **LLM-powered course recommender (FastAPI, AWS)** serving **10K+ courses** to university community, with bias analysis and network visualization validating embedding space semantic relationships across academic domains.
- Led research culminating in **first-author publication** and collaboration with Michigan Online for professional certification recommendations.

### Michigan Tech Research Institute

**May. 2024 – Aug. 2024**

*Machine Learning Research Intern*

*Ann Arbor, MI*

- Led literature review on ML for **super resolution and image registration** for a Ford automotive camera project.
- Designed and trained a CNN with a custom loss function to predict warping parameters for 128x128 image chips, reducing LBFGS optimizer iterations by **30%** and accelerating image registration processing times.
- Implemented framework enabling custom gradients for functions incompatible with MATLAB autodifferentiation.

## INDUSTRY EXPERIENCE

### Honeywell

**Jun. 2025 – Aug. 2025**

*AI/ML Engineering Intern*

*Atlanta, GA*

- Developed **computer vision** and **OCR**-based floor plan digitization system for automated corporate building bidding pipeline, enabling downstream sensor placement optimization and cost estimation.
- Led R&D evaluation of open-source, academic, and foundation models for floor plan semantic segmentation.
- Built an **agentic vibration analysis system** for industrial equipment that autonomously diagnoses mechanical faults by combining signal processing with LLM-powered expert reasoning.

### Neurabuild

**Jul. 2023 – Aug. 2023**

*Machine Learning Intern*

*Capetown, South Africa*

- Developed ML solutions to automate sky visibility for portable astronomical sites, including a W-net for semantic segmentation of clear vs. cloudy skies and a CNN classifier achieving **95%** accuracy in night sky condition detection.
- Improved existing neuromorphic satellite detection and tracking model performance by **10%** using edge detection and KerasTuner for hyperparameter optimization.

## PROJECTS

---

### Are Personas All You Need? Stress-Testing Persona Vectors as Alignment Tools | *AI Safety, Interpretability, Evaluation*

- Evaluating whether **persona vectors** are reliable tools for **monitoring alignment drift** during fine-tuning. Found persona similarity correlates with **cross-trait effects** at a coarse level, but robustness failures are common.

### HistoriCam: Photo-to-History Landmark Identification | *MLOps, Computer Vision, RAG*

- Built a web app that identifies a building from a photo and retrieves historical context; implemented the **building identification pipeline** using vision embeddings and **vector search** with top- $k$  majority voting above a cosine-similarity threshold. Deployed the vision + LLM backend on **GCP Kubernetes** with autoscaling.

### Prompting Our Way to Safety: Comparing System Prompt Strategies | *Huggingface, AI Safety, Evaluation*

- Conducted experiment for Harvard CS 2881r comparing system prompt strategies on Deepseek-R1 models; found principled prompts can achieve safety comparable to fine-tuned models while reducing over-refusal by 2-10 $\times$ . Published on LessWrong.

### Unembedding Steering in Large Language Models | *PyTorch, Transformers, Representation Engineering*

- Developed novel steering method using averaged token unembedding vectors, comparing against linear probing and CAA on Gemma-2-2b with contrastive evaluation framework. Demonstrated competitive performance with learned methods while requiring no training, revealing alignment between token representations and internal model activations.

### optiMaizer: Optimization Algorithm Benchmarking Suite | *Python, Numerical Optimization, Performance Analysis*

- Implemented and benchmarked 10 optimization algorithms across diverse test functions. Conducted systematic L-BFGS memory analysis revealing intermediate memory sizes often outperform large configurations on complex landscapes.

### SHLIME: Adversarial Robustness for Explainable AI | *Python, Adversarial ML, XAI*

- Replicated adversarial attacks against LIME and SHAP, developing novel combined defense method improving robustness while maintaining explanation quality.

## TECHNICAL SKILLS

---

**Languages:** Python, C++, SQL, TypeScript, MATLAB, L<sup>A</sup>T<sub>E</sub>X

**Machine Learning:** PyTorch, TensorFlow, Transformers, Hugging Face, Scikit-learn, XGBoost

**ML Engineering & Production Systems:** OpenAI API, LangChain, LLM Agents, Vector Databases / RAG Systems, Model Distillation & Quantization, OpenCV, Docker, Kubernetes, MLflow, Weights & Biases, Git, FastAPI

**Cloud & Infrastructure:** AWS, Google Cloud, Azure ML, CI/CD, Data Pipelines & ETL

**Data & Visualization:** NumPy, Pandas, SciPy, Matplotlib, Plotly, Jupyter
